

# DRAFT BEER LINE CLEANING KIT INSTRUCTION

## Includes in the Beer Line Cleaning Kit:

- Single-Sided Beer Tap Brush
- Faucet Wrench
- Cleaning Kit Bottle
- 4" Metal Pump
- Beer Line Cleaners for Kegeators – 32 OZ

## Additional Item Needed:

1. Bucket
2. Water

**Cleaning your draft beer system is crucial for the health of your kegerator and can negatively affect your beer's quality if left unattended. Regularly cleaning your system will enhance the longevity of its components and flush out any unwanted contaminants! Always clean your commercial home tap setup between every keg use. Cleaning your system will ensure that your tap, lines and faucet are clean, resulting in a better-tasting beer.**

1. Remove the tap from the keg. Use the wrench provided to remove the faucet from the shank. The collar should have a few holes in it, insert the wrench end into a hole and spin the collar clockwise to remove it.
2. Disassemble the faucet to the point that the shaft inside can slide out. Place these parts in a bowl with 2 cups of warm water and ¼ teaspoon of Beer Line Cleaner. Take the lid off of the cleaner pump and remove the O-Ring. Use this O-Ring to attach the brass end of the pump unit into the collar of the shank (hand tighten).
3. Put one cap-full of cleaner into the jar and fill it with warm water. Attach the lid unit back on the jar. Get a bucket to collect the fluid running from the tap, the tap will not allow the beer to backflush. Insert the cleaning brush's small end into the bottom of the tap to allow the flow to go through.
4. Pump cleaning solution through the line and tap allowing the solution to sit in the lines for 10–15 minutes, then pump through. Follow this with 1–2 jars of water to rinse. Remove the brush from the tap.
5. Use the brush to clean the faucet, then rinse with water. Reassemble the faucet, hand tighten parts, leave them loose enough so that they move freely. Attach the faucet back onto the shank again, using the wrench, **do not over tighten**, just tight enough so that it does not leak

***Attach tap to new keg & enjoy!!***
